NAME

ccos, ccosf, ccosl − complex cosine function

SYNOPSIS

#include <complex.h>

double complex ccos(double complex *z***);**
float complex ccosf(float complex *z***);**
long double complex ccosl(long double complex *z***);**

Link with *−lm*.

DESCRIPTION

These functions calculate the complex cosine of *z*.

The complex cosine function is defined as:

ccos(z) = (exp(i * z) + exp(−i * z)) / 2

VERSIONS

These functions first appeared in glibc in version 2.1.

ATTRIBUTES

For an explanation of the terms used in this section, see **attributes**(7).

Interface	Attribute	Value
ccos(), **ccosf**(), **ccosl**()	Thread safety	MT-Safe

CONFORMING TO

C99, POSIX.1-2001, POSIX.1-2008.
