

## NAME

File::HomeDir::Darwin::Cocoa – Find your home and other directories on Darwin (OS X)

## DESCRIPTION

This module provides Darwin-specific implementations for determining common user directories using Cocoa API through Mac::SystemDirectory. In normal usage this module will always be used via File::HomeDir.

Theoretically, this should return the same paths as both of the other Darwin drivers.

Because this module requires Mac::SystemDirectory, if the module is not installed, File::HomeDir will fall back to File::HomeDir::Darwin.

## SYNOPSIS

```
use File::HomeDir;

# Find directories for the current user
$home    = File::HomeDir->my_home;      # /Users/mylogin
$desktop = File::HomeDir->my_desktop;    # /Users/mylogin/Desktop
$docs    = File::HomeDir->my_documents;  # /Users/mylogin/Documents
$music   = File::HomeDir->my_music;      # /Users/mylogin/Music
$pics    = File::HomeDir->my_pictures;   # /Users/mylogin/Pictures
$videos  = File::HomeDir->my_videos;     # /Users/mylogin/Movies
$data    = File::HomeDir->my_data;       # /Users/mylogin/Library/Application Support
```
