

NAME

addgnupghome – Create .gnupg home directories

SYNOPSIS

addgnupghome *account_1 account_2...account_n*

DESCRIPTION

If GnuPG is installed on a system with existing user accounts, it is sometimes required to populate the GnuPG home directory with existing files. Especially a *trustlist.txt* and a keybox with some initial certificates are often desired. This script helps to do this by copying all files from */etc/skel/.gnupg* to the home directories of the accounts given on the command line. It takes care not to overwrite existing GnuPG home directories.

addgnupghome is invoked by root as:

addgnupghome *account1 account2 ... accountn*
