

NAME

gpgsplit – Split an OpenPGP message into packets

SYNOPSIS

gpgsplit [*OPTIONS*] [*FILES*]

DESCRIPTION

This manual page documents briefly the **gpgsplit** command.

gpgsplit splits an OpenPGP message into packets.

OPTIONS

-v,--verbose

Verbose.

-p,--prefix *STRING*

Prepend filenames with *STRING*.

--uncompress

Uncompress a packet.

--secret-to-public

Convert secret keys to public keys.

--no-split

Write to stdout and don't actually split.
