

NAME

XML::XPathEngine::Number – Simple numeric values.

DESCRIPTION

This class holds simple numeric values. It doesn't support `-0`, `+/- Infinity`, or `NaN`, as the XPath spec says it should, but I'm not hurting anyone I don't think.

API

new(\$num)

Creates a new `XML::XPathEngine::Number` object, with the value in `$num`. Does some rudimentary numeric checking on `$num` to ensure it actually is a number.

value()

Also as overloaded stringification. Returns the numeric value held.
