

**NAME**

Glib::Param::Double – Wrapper for double parameters in GLib

**HIERARCHY**

```
Glib::ParamSpec  
+----Glib::Param::Double
```

```
Glib::ParamSpec  
+----Glib::Param::Float
```

**DESCRIPTION**

This page documents the extra accessors available for both of the floating-point type paramspecs: Float and Double. Perl really only supports doubles, so all of these methods return NVs (that is, the C type “double”); the distinction of size is important to the underlying C library and also determines the data value range.
