

NAME

`dh_numpy` – adds Numpy depends to python:Depends substar

SYNOPSIS

dh_numpy [*debhelper options*]

DESCRIPTION

`dh_numpy` adds information about the correct versioned depends on python-numpy to python:Depends substar.

This is needed because some Python extensions require strict versioned depends on python-numpy, and using this helper script is the easiest and most consistent way to get them.

The helper script uses the information stored in `/usr/share/numpy/versions`, and the architecture type of the package, to generate the Depends information; for a detailed description of how the dependencies are generate, please refer to `/usr/share/doc/python-numpy/README.DebianMaints` .

SEE ALSO

debhelper(7)

This program is not a part of debhelper (and it's provided by python-numpy).
