

**NAME**

update-initramfs.conf – configuration file for update-initramfs

**DESCRIPTION**

The configuration file allows one to disable the update action from **update-initramfs**.

**GENERAL VARIABLES****update\_initramfs**

Default is *yes* for running the latest initramfs-tools hooks in the newest Linux image. Setting it to *all* updates any known initramfs. It is possible to set it to *no* for remote servers or boxes where conservative manners needs to be applied. This disables the **update\_initramfs -u** call.

**backup\_initramfs**

If set **update\_initramfs** keeps an .bak file of the previous initramfs. If unset the backup initramfs will not be kept.

**FILES**

*/etc/initramfs-tools/update-initramfs.conf*

**AUTHOR**

The initramfs-tools are written by Maximilian Attems <maks@debian.org>, Jeff Bailey <jbailey@raspberrypi.com> and numerous others.
