

NAME

xslt-config - script to get information about the installed version of libxslt

SYNOPSIS

xslt-config [--prefix[=*DIR*]] [--libs] [--cflags] [--version] [--help]

DESCRIPTION

xslt-config is a tool that is used to determine the compile and linker flags that should be used to compile and link programs that use *libxslt*.

OPTIONS

xslt-config accepts the following options:

--version

Print the currently installed version of *libxslt* on the standard output.

--libs Print the linker flags that are necessary to link a *libxslt* program.

--cflags

Print the compiler flags that are necessary to compile a *libxslt* program.

--prefix=PREFIX

If specified, use PREFIX instead of the installation prefix that *libxslt* was built with when computing the output for the **--cflags** and **--libs** options. This option must be specified before any **--libs** or **--cflags** options.

AUTHOR

This manual page was adapted from the xml-config by Will Newton <will@misconeption.org.uk>.

The xml-config manual page was written by Fredrik Hallenberg <hallon@lysator.liu.se>, for the Debian GNU/Linux system (but may be used by others).
