

NAME

mousetweaks – Accessibility enhancements for pointing devices

SYNOPSIS

```
mousetweaks      [--dwell]      [--ssc]      [--dwell-time=FLOAT]      [--ssc-time=FLOAT]
[-m|--dwell-mode=STRING] [-c|--show-ctw] [-t|--threshold=INT] [-g|--geometry] [-s|--shutdown]
[--daemonize] [-?|--help]
```

DESCRIPTION

mousetweaks is a collection of accessibility enhancements for pointing devices. This manual page describes the mousetweaks daemon.

OPTIONS**--dwell**

Automatically perform mouse clicks without using a physical button.

--ssc Trigger the secondary mouse button when the primary mouse button is held down for a specified amount of time.

--dwell-time=FLOAT

Time to keep the pointer motionless before a dwell click is performed. Range: 0.2 – 3.0 seconds.

--ssc-time=FLOAT

Time to hold the primary mouse button before a simulated secondary click is performed. Range: 0.5 – 3.0 seconds.

-m, --dwell-mode=STRING

Select a dwell mode. Available options: **window** – Select the click type from a window or a panel applet. **gesture** – Perform different clicks by moving in different directions.

-c, --show-ctw

Show the click-type window. Only useful in combination with **--dwell-mode=window**.

-t, --threshold=INT

Ignore small pointer movements. Range: 0 – 30 pixels.

-g, --geometry

Size and position of the click-type window. Expects a standard X Window System geometry string. ie. WIDTHxHEIGHT+X+Y

-s, --shutdown

Stop the mousetweaks daemon.

--daemonize

Start mousetweaks in the background, ie. spawn a child process.

--login

Start mousetweaks in login mode. Login mode enables workarounds specific to GDM. Currently unused.

FILES

mousetweaks.pid

The daemon creates a lock file in the \$XDG_RUNTIME_DIR directory to keep track of its state. On systems with no user runtime directory, the \$XDG_CACHE_HOME directory is used.

BUGS

Report bugs to <<http://bugzilla.gnome.org/>> <<http://bugzilla.gnome.org/>>
