

NAME

futimes, lutimes – change file timestamps

SYNOPSIS

```
#include <sys/time.h>
```

```
int futimes(int fd, const struct timeval tv[2]);
```

```
int lutimes(const char *filename, const struct timeval tv[2]);
```

Feature Test Macro Requirements for glibc (see **feature_test_macros(7)**):

futimes(), **lutimes()**:

Since glibc 2.19:

 _DEFAULT_SOURCE

Glibc 2.19 and earlier:

 _BSD_SOURCE

DESCRIPTION

futimes() changes the access and modification times of a file in the same way as **utimes(2)**, with the difference that the file whose timestamps are to be changed is specified via a file descriptor, *fd*, rather than via a pathname.

lutimes() changes the access and modification times of a file in the same way as **utimes(2)**, with the difference that if *filename* refers to a symbolic link, then the link is not dereferenced: instead, the timestamps of the symbolic link are changed.

RETURN VALUE

On success, zero is returned. On error, -1 is returned, and *errno* is set appropriately.

ERRORS

Errors are as for **utimes(2)**, with the following additions for **futimes()**:

EBADF

fd is not a valid file descriptor.

ENOSYS

The */proc* filesystem could not be accessed.

The following additional error may occur for **lutimes()**:

ENOSYS

The kernel does not support this call; Linux 2.6.22 or later is required.

VERSIONS

futimes() is available since glibc 2.3. **lutimes()** is available since glibc 2.6, and is implemented using the **utimensat(2)** system call, which is supported since kernel 2.6.22.

ATTRIBUTES

For an explanation of the terms used in this section, see **attributes(7)**.

Interface	Attribute	Value
futimes() , lutimes()	Thread safety	MT-Safe

CONFORMING TO

These functions are not specified in any standard. Other than Linux, they are available only on the BSDs.

SEE ALSO

utime(2), **utimensat(2)**, **symlink(7)**

COLOPHON

This page is part of release 5.02 of the Linux *man-pages* project. A description of the project, information about reporting bugs, and the latest version of this page, can be found at <https://www.kernel.org/doc/man-pages/>.
