

NAME

ssh-pkcs11-helper — ssh-agent helper program for PKCS#11 support

SYNOPSIS

ssh-pkcs11-helper [**-v**]

DESCRIPTION

ssh-pkcs11-helper is used by `ssh-agent(1)` to access keys provided by a PKCS#11 token.

ssh-pkcs11-helper is not intended to be invoked by the user, but from `ssh-agent(1)`.

A single option is supported:

- v** Verbose mode. Causes **ssh-pkcs11-helper** to print debugging messages about its progress. This is helpful in debugging problems. Multiple **-v** options increase the verbosity. The maximum is 3.

Note that `ssh-agent(1)` will automatically pass the **-v** flag to **ssh-pkcs11-helper** when it has itself been placed in debug mode.

SEE ALSO

`ssh(1)`, `ssh-add(1)`, `ssh-agent(1)`

HISTORY

ssh-pkcs11-helper first appeared in OpenBSD 4.7.
