

NAME

wnpp-alert – check for installed packages up for adoption or orphaned

SYNOPSIS

wnpp-alert [**--diff**] [*package ...*]

wnpp-alert **--help**|**--version**

DESCRIPTION

wnpp-alert downloads the lists of packages which have been orphaned (O), are up for adoption (RFA), or the maintainer has asked for help (RFH) from the WNPP webpages, and then outputs a list of packages installed on the system, or matching the listed packages, which are in those lists.

Note that WNPP, and therefore **wnpp-alert**'s output, is source package based.

OPTIONS

--diff, -d

If the `$XDG_CACHE_HOME/devscripts` directory exists, compare the output of **wnpp-alert** to the previous output (cached in the file *wnpp-diff*) and output the differences.

--help, -h

Show a summary of options.

--version, -v

Show version and copyright information.
