

NAME

zramctl – set up and control zram devices

SYNOPSIS

Get info:

zramctl [options]

Reset zram:

zramctl -r *zramdev*...

Print name of first unused zram device:

zramctl -f

Set up a zram device:

zramctl [-f | *zramdev*] [-s *size*] [-t *number*] [-a *algorithm*]

DESCRIPTION

zramctl is used to quickly set up zram device parameters, to reset zram devices, and to query the status of used zram devices.

If no option is given, all non-zero size zram devices are shown.

Note that *zramdev* node specified on command line has to already exist. The command **zramctl** creates a new `/dev/zram<N>` nodes only when **--find** option specified. It's possible (and common) that after system boot `/dev/zram<N>` nodes are not created yet.

OPTIONS

-a, --algorithm *lzo|lz4|lz4hc|deflate|842*

Set the compression algorithm to be used for compressing data in the zram device.

-f, --find

Find the first unused zram device. If a **--size** argument is present, then initialize the device.

-n, --noheadings

Do not print a header line in status output.

-o, --output *list*

Define the status output columns to be used. If no output arrangement is specified, then a default set is used. Use **--help** to get a list of all supported columns.

--output-all

Output all available columns.

--raw Use the raw format for status output.

-r, --reset

Reset the options of the specified zram device(s). Zram device settings can be changed only after a reset.

-s, --size *size*

Create a zram device of the specified *size*. Zram devices are aligned to memory pages; when the requested *size* is not a multiple of the page size, it will be rounded up to the next multiple. When not otherwise specified, the unit of the *size* parameter is bytes.

The *size* argument may be followed by the multiplicative suffixes KiB (=1024), MiB (=1024*1024), and so on for GiB, TiB, PiB, EiB, ZiB and YiB (the "iB" is optional, e.g., "K" has the same meaning as "KiB") or the suffixes KB (=1000), MB (=1000*1000), and so on for GB,

TB, PB, EB, ZB and YB.

-t, --streams *number*

Set the maximum number of compression streams that can be used for the device. The default is one stream.

-V, --version

Display version information and exit.

-h, --help

Display help text and exit.

RETURN VALUE

zramctl returns 0 on success, nonzero on failure.

FILES

/dev/zram[0..N]

zram block devices

EXAMPLE

The following commands set up a zram device with a size of one gigabyte and use it as swap device.

```
# zramctl --find --size 1024M
/dev/zram0
# mkswap /dev/zram0
# swapon /dev/zram0
...
# swapoff /dev/zram0
# zramctl --reset /dev/zram0
```
