

NAME

xlogo - X Window System logo

SYNOPSIS

xlogo [-*toolkitoption* ...]

DESCRIPTION

The *xlogo* program displays the X Window System logo.

OPTIONS

Xlogo accepts all of the standard X Toolkit command line options, as well as the following:

- render** This option indicates that the logo should be drawn with anti-aliased edges using the RENDER extension.
- sharp** If -render is also specified, this forces the edges to be rendered in sharp mode, (ie. 1-bit alpha channel).
- shape** This option indicates that the logo window should be shaped rather than rectangular.

RESOURCES

The default width and the default height are each 100 pixels. This program uses the *Logo* widget in the Athena widget set. It understands all of the Simple widget resource names and classes as well as:

foreground (class **Foreground**)

Specifies the color for the logo. The default is depends on whether *reverseVideo* is specified. If *reverseVideo* is specified the default is *XtDefaultForeground*, otherwise the default is *XtDefaultBackground*.

shapeWindow (class **ShapeWindow**)

Specifies that the window is shaped to the X logo. The default is False.

WIDGETS

In order to specify resources, it is useful to know the hierarchy of the widgets which compose *xlogo*. In the notation below, indentation indicates hierarchical structure. The widget class name is given first, followed by the widget instance name.

XLogo xlogo
 Logo xlogo

ENVIRONMENT**DISPLAY**

to get the default host and display number.

XENVIRONMENT

to get the name of a resource file that overrides the global resources stored in the RESOURCE_MANAGER property.

FILES

/etc/X11/app-defaults/XLogo
specifies required resources
