

NAME

mdoc validate – Validate XML documents against a schema

SYNOPSIS

mdoc validate [OPTIONS]* PATHS+

DESCRIPTION

mdoc validate validates the specified *PATHS* against a specified format schema.

OPTIONS

--format=FORMAT

The documentation format to validate *PATHS* against. Supported formats include: *ecma*.

See the *FORMATS* section below for more information about these formats.

The default format (if none is specified) is *ecma*.

-h, -?, --help

Display a help message and exit.

FORMATS

The following documentation formats are supported:

ecma

The *Mono ECMA Documentation Format* validates all output generated by **mdoc-update**(1) against an XML schema, including the *index.xml*, *ns-*.xml*, and *NamespaceName/TypeName.xml* files.

See **mdoc**(5) for details about this file format.

EXAMPLES

To validate the **mdoc-update**(1) output stored within a directory (and all documentation within that directory, recursively), use:

```
mdoc validate /path/to/ecma/docs
```
