

NAME

XML::LibXML::DocumentFragment – XML::LibXML's DOM L2 Document Fragment Implementation

SYNOPSIS

```
use XML::LibXML;
```

DESCRIPTION

This class is a helper class as described in the DOM Level 2 Specification. It is implemented as a node without name. All adding, inserting or replacing functions are aware of document fragments now.

As well *all* unbound nodes (all nodes that do not belong to any document sub-tree) are implicit members of document fragments.
