

**NAME**

systemd-hibernate-resume-generator – Unit generator for resume= kernel parameter

**SYNOPSIS**

/lib/systemd/system-generators/systemd-hibernate-resume-generator

**DESCRIPTION**

**systemd-hibernate-resume-generator** is a generator that initiates the procedure to resume the system from hibernation. It instantiates the **systemd-hibernate-resume@.service**(8) unit according to the value of **resume=** parameter specified on the kernel command line, which will instruct the kernel to resume the system from the hibernation image on that device.

**KERNEL COMMAND LINE**

systemd-hibernate-resume-generator understands the following kernel command line parameters:

*resume=*

Takes a path to the resume device. Both persistent block device paths like /dev/disk/by-foo/bar and **fstab**(5)-style specifiers like "FOO=bar" are supported.

*noresume*

Do not try to resume from hibernation. If this parameter is present, *resume=* is ignored.
