

NAME

getloadavg – get system load averages

SYNOPSIS

```
#include <stdlib.h>
```

```
int getloadavg(double loadavg[], int nelem);
```

Feature Test Macro Requirements for glibc (see **feature_test_macros(7)**):

getloadavg():

Since glibc 2.19:

 _DEFAULT_SOURCE

In glibc up to and including 2.19:

 _BSD_SOURCE

DESCRIPTION

The **getloadavg()** function returns the number of processes in the system run queue averaged over various periods of time. Up to *nelem* samples are retrieved and assigned to successive elements of *loadavg[]*. The system imposes a maximum of 3 samples, representing averages over the last 1, 5, and 15 minutes, respectively.

RETURN VALUE

If the load average was unobtainable, **-1** is returned; otherwise, the number of samples actually retrieved is returned.

VERSIONS

This function is available in glibc since version 2.2.

ATTRIBUTES

For an explanation of the terms used in this section, see **attributes(7)**.

Interface	Attribute	Value
getloadavg()	Thread safety	MT-Safe

CONFORMING TO

Not in POSIX.1. Present on the BSDs and Solaris.
