

**NAME**

nautilus-sendto – convenience application to send a file via email

**SYNOPSIS**

**nautilus-sendto** [*OPTIONS* | *FILES...*]

**DESCRIPTION**

Send FILE(s) via email.

This command will open the default mailer after having attached the files mentioned on the command-line. If a directory is passed instead of files, it will have been zipped up before being attached.

The application is intended to integrate with nautilus and is written for the GNOME graphical desktop.

**OPTIONS**

**–?, --help**

Show a help message listing all the options and their meanings.
