

NAME

nmtui – Text User Interface for controlling NetworkManager

SYNOPSIS

nmtui-edit | **nmtui edit** {*name* | *id*}

nmtui-connect | **nmtui connect** {*name* | *uuid* | *device* | *SSID*}

nmtui-hostname | **nmtui hostname**

DESCRIPTION

nmtui is a curses-based TUI application for interacting with NetworkManager. When starting **nmtui**, the user is prompted to choose the activity to perform unless it was specified as the first argument.

The supported activities are:

edit

Show a connection editor that supports adding, modifying, viewing and deleting connections. It provides similar functionality as **nm-connection-editor**.

connect

Show a list of available connections, with the option to activate or deactivate them. It provides similar functionality as **nm-applet**.

hostname

Set the system hostname.

Corresponding to above activities, **nmtui** also comes with binaries named **nmtui-edit**, **nmtui-connect**, and **nmtui-hostname** to skip the selection of the activities.
