

NAME

FcConfigEnableHome – controls use of the home directory.

SYNOPSIS

```
#include <fontconfig/fontconfig.h>
```

```
FcBool FcConfigEnableHome (FcBool enable);
```

DESCRIPTION

If *enable* is FcTrue, then Fontconfig will use various files which are specified relative to the user's home directory (using the ~ notation in the configuration). When *enable* is FcFalse, then all use of the home directory in these contexts will be disabled. The previous setting of the value is returned.
