

NAME

`wdctl` – show hardware watchdog status

SYNOPSIS

wdctl [options] [*device*...]

DESCRIPTION

Show hardware watchdog status. The default device is `/dev/watchdog`. If more than one device is specified then the output is separated by one blank line.

Note that the number of supported watchdog features is hardware specific.

OPTIONS

-f, --flags *list*

Print only the specified flags.

-F, --noflags

Do not print information about flags.

-I, --noident

Do not print watchdog identity information.

-n, --noheadings

Do not print a header line for flags table.

-o, --output *list*

Define the output columns to use in table of watchdog flags. If no output arrangement is specified, then a default set is used. Use **--help** to get list of all supported columns.

-O, --oneline

Print all wanted information on one line in key="value" output format.

-r, --raw

Use the raw output format.

-s, --settimeout *seconds*

Set the watchdog timeout in seconds.

-T, --notimeouts

Do not print watchdog timeouts.

-x, --flags-only

Same as **-I -T**.

-V, --version

Display version information and exit.

-h, --help

Display help text and exit.
