

NAME

`git-sh-i18n--envsubst` – Git's own `envsubst(1)` for i18n fallbacks

SYNOPSIS

```
eval_gettext () {  
    printf "%s" "$1" | (  
        export PATH $(git sh-i18n--envsubst --variables "$1");  
        git sh-i18n--envsubst "$1"  
    )  
}
```

DESCRIPTION

This is not a command the end user would want to run. Ever. This documentation is meant for people who are studying the plumbing scripts and/or are writing new ones.

git sh-i18n--envsubst is Git's stripped-down copy of the GNU **envsubst(1)** program that comes with the GNU gettext package. It's used internally by **git-sh-i18n(1)** to interpolate the variables passed to the **eval_gettext** function.

No promises are made about the interface, or that this program won't disappear without warning in the next version of Git. Don't use it.
