

**NAME**

gnome-system-monitor — view and control processes

**SYNOPSIS**

**gnome-system-monitor** [-s,--simple]

**gnome-system-monitor**

The gnome-system-monitor allows you to view and control the processes running on your system. You can access detailed memory maps, send signals, and terminate the processes.

In addition, the gnome-system-monitor provides an overall view of the resource usage on your system, including memory and CPU allocation.

**OPTIONS**

This program accepts all the standard GNOME and GTK+ options, which follow the usual GNU command line syntax, with long options starting with two dashes ('-'). In addition to those standard GNOME options, the gnome-system-monitor accepts the following options:

**-s,       --simple**

Show a simple dialog to end processes and log out.

**AUTHOR**

The gnome-system-monitor was written by Kevin Vandersloot .

This manual page was written by Colin Walters [walters@debian.org](mailto:walters@debian.org) for the **Debian** system (but may be used by others).
