

**NAME**

XtToolkitThreadInitialize – initialize the toolkit for multiple threads

**SYNTAX**

Boolean XtToolkitThreadInitialize(void);

**DESCRIPTION**

If **XtToolkitThreadInitialize** was previously called, it returns. The application programmer must ensure that two or more threads do not simultaneously attempt to call **XtToolkitThreadInitialize**; the effect of this is undefined. **XtToolkitThreadInitialize** returns **True** if the host operating system has threads and the Intrinsics are thread safe.
