

## NAME

activate-global-python-argcomplete – activate-global-python-argcomplete - argcomplete utility script

## DESCRIPTION

usage: activate-global-python-argcomplete [-h] [--dest DEST] [--user]

[--no-defaults]

[--complete-arguments ...]

Activate the generic bash-completion script for the argcomplete module.

### optional arguments:

**-h, --help**

show this help message and exit

**--dest DEST**

Specify the bash completion modules directory to install into

**--user** Install into user directory (~/.bash\_completion.d/)

**--no-defaults**

When no matches are generated, do not fallback to readline's default completion

**--complete-arguments ...**

arguments to call complete with; use of this option discards default options
