

NAME

wineboot – perform Wine initialization, startup, and shutdown tasks

SYNOPSIS

wineboot [*options*]

DESCRIPTION

wineboot performs the initial creation and setup of a WINEPREFIX for wine(1). It can also perform a simulated reboot or shutdown to any applications running within the WINEPREFIX.

OPTIONS

- h, --help**
Display help message.
- e, --end-session**
End the current session cleanly.
- f, --force**
Force exit for processes that don't exit cleanly
- i, --init**
Initialize the WINEPREFIX.
- k, --kill**
Kill running processes without any cleanup.
- r, --restart**
Restart only, don't do normal startup operations.
- s, --shutdown**
Shutdown only, don't reboot.
- u, --update**
Update the WINEPREFIX.

BUGS

Bugs can be reported on the **Wine bug tracker** <<https://bugs.winehq.org>>.

AVAILABILITY

wineboot is part of the Wine distribution, which is available through WineHQ, the **Wine development headquarters** <<https://www.winehq.org/>>.
