

NAME

telegram-desktop – official telegram messaging application

SYNOPSIS

telegram-desktop [**-startintray**] [**-many**] [**-debug**] [**--** *URI*]

DESCRIPTION

This manual page documents how to run **Telegram Desktop**, official Telegram client.

OPTIONS

The program understands various parameters, some of them are described in the present document.

-startintray

Do not show the main window, just start in the system tray. Useful for automatic launching.

-many Allow multiple instances of the client at the same time.

-debug

Run in debug mode immediately. See logs in `~/.local/share/TelegramDesktop/DebugLogs`.

URI Specify Telegram URI. It is used for automatically opening chats by **t.me** site.

ENVIRONMENT**HOME**

User home directory where it stores downloaded files and configuration.
