

NAME

fbstat – analyze firebird database

SYNOPSIS

```
fbstat [command] [option...] [server:]database
fbstat -h server:db
fbstat -all server:db
fbstat -data server:db
```

DESCRIPTION

(*Note:* Due to file-level conflict, the Debian package has changed the name of **gstat** to fbstat.)

fbstat Analyzes Firebird databases and produces different kinds of reports. These are useful when analyzing where all this huge disk space has gone or when estimating evaluating index efficiency.

OPTIONS

-all
Analyze data and index pages.

-data
Analyze data pages.

-system
Analyze system tables.

-header
Display information from the database header, skip analyzing any tables.

-index
Analyze leaf index pages.

-record
Analyze average record and version length.

-table *table*
Analyze data pages used by the given table.

-nocreation
Suppress creation date.

-user *name*
-password *secret*
-fetch_password *file*
Authentication parameters.

-z
-? Displays version number.
