

**NAME**

transition-check – check a package list for involvement in transitions

**SYNOPSIS**

**transition-check** **--help**|**--version**

**transition-check** [**-f**]**--filename=FILENAME** [*source package list*]

**DESCRIPTION**

**transition-check** checks whether any of the listed source packages are involved in a transition for which uploads to unstable are currently blocked.

If neither a filename nor a list of packages is supplied, **transition-check** will use the source package name from *debian/control*.

**OPTIONS**

**-f**, **--filename=filename**

Read a source package name from *filename*, which should be a Debian package control file or *.changes* file, and add that package to the list of packages to check.

**EXIT STATUS**

The exit status indicates whether any of the packages examined were found to be involved in a transition.

0 Either **--help** or **--version** was used, or none of the packages examined was involved in a transition.

1 At least one package examined is involved in a current transition.
