

NAME

winecfg – Wine Configuration Editor

SYNOPSIS

winecfg

DESCRIPTION

winecfg is the Wine configuration editor. It allows you to change several settings, such as DLL load order (native versus builtin), enable a virtual desktop, setup disk drives, and change the Wine audio driver, among others. Many of these settings can be made on a per application basis, for example, preferring native riched20.dll for wordpad.exe, but not for notepad.exe.

BUGS

Bugs can be reported on the **Wine bug tracker** <<https://bugs.winehq.org>>.

AVAILABILITY

winecfg is part of the Wine distribution, which is available through WineHQ, the **Wine development headquarters** <<https://www.winehq.org/>>.
