

NAME

check-mir – check support status of dependencies

SYNOPSIS

check-mir

DESCRIPTION

This script checks if any of a package's build or binary dependencies is in universe/multiverse. If the source package is destined for Ubuntu main or restricted, these either need to be eliminated or need to be promoted to main, following <https://wiki.ubuntu.com/MainInclusionProcess>.

There are no options, just run it in a source package directory.

AUTHOR

check-mir was written by Martin Pitt <martin.pitt@ubuntu.com>.
