

**NAME**

git-remote-testgit – Example remote-helper

**SYNOPSIS**

git clone testgit::<source-repo> [<destination>]

**DESCRIPTION**

This command is a simple remote-helper, that is used both as a testcase for the remote-helper functionality, and as an example to show remote-helper authors one possible implementation.

The best way to learn more is to read the comments and source code in *git-remote-testgit*.
