

NAME

urxvt-extensions – briefly list urxvt perl extensions

SYNOPSIS

urxvt -pe extension-name

DESCRIPTION

This manpage briefly lists the rxvt-unicode extensions available in this version of rxvt-unicode. For information on how to write urxvt extensions, see the urxvt-extensions manpage.

Extensions that use resources for configuration are loaded automatically when their resources are specified as command-line switches. Any extension can be loaded explicitly with the `-pe` switch.

EXTENSION LIST

background – manage terminal background

bell-command – execute a command when the bell rings

block-graphics-to-ascii – map block graphics to ascii characters

clipboard-osc – implement the clipboard operating system command sequence

confirm-paste – ask for confirmation before pasting multiline text

digital-clock – display a digital clock overlay

eval – evaluate arbitrary perl code using actions

example-refresh-hooks – example of how to use refresh hooks

keysym-list – implement the “list” keysym expansion.

kuake – kuake-like hotkey terminal

matcher – match strings in terminal output and change their rendition

option-popup – option menu (enabled by default)

overlay-osc – implement OSC to manage overlays

readline – improve readline editing (enabled by default)

remote-clipboard – manage a shared and possibly remote clipboard

searchable-scrollback – incremental scrollback search (enabled by default)

selection – more intelligent selection (enabled by default)

selection-autotransform – automatically transform select text

selection-pastebin – automatic pastebin upload

selection-popup – (enabled by default)

selection-to-clipboard – copy the selection to the clipboard each time a selection is made

tabbed – tabbed interface to urxvt

xim-onthespot – implement XIM “on-the-spot” behaviour

font-size – interactive font size setter
