

NAME

`addpart` – tell the kernel about the existence of a partition

SYNOPSIS

addpart *device partition start length*

DESCRIPTION

addpart tells the Linux kernel about the existence of the specified partition. The command is a simple wrapper around the "add partition" ioctl.

This command doesn't manipulate partitions on a block device.

PARAMETERS

device The disk device.

partition
 The partition number.

start The beginning of the partition (in 512-byte sectors).

length The length of the partition (in 512-byte sectors).

SEE ALSO

delpart(8), fdisk(8), parted(8), partprobe(8), partx(8)

AVAILABILITY

The `addpart` command is part of the `util-linux` package and is available from <https://www.kernel.org/pub/linux/utils/util-linux/>.
