

NAME

base32 – base32 encode/decode data and print to standard output

SYNOPSIS

base32 [*OPTION*]... [*FILE*]

DESCRIPTION

Base32 encode or decode *FILE*, or standard input, to standard output.

With no *FILE*, or when *FILE* is –, read standard input.

Mandatory arguments to long options are mandatory for short options too.

-d, --decode

decode data

-i, --ignore-garbage

when decoding, ignore non-alphabet characters

-w, --wrap=COLS

wrap encoded lines after COLS character (default 76). Use 0 to disable line wrapping

--help display this help and exit

--version

output version information and exit

The data are encoded as described for the base32 alphabet in RFC 4648. When decoding, the input may contain newlines in addition to the bytes of the formal base32 alphabet. Use **--ignore-garbage** to attempt to recover from any other non-alphabet bytes in the encoded stream.
