

**NAME**

devlink-monitor – state monitoring

**SYNOPSIS**

**devlink monitor** [ **all** | *OBJECT-LIST* ]

**DESCRIPTION**

The **devlink** utility can monitor the state of devlink devices and ports continuously. This option has a slightly different format. Namely, the **monitor** command is the first in the command line and then the object list.

*OBJECT-LIST* is the list of object types that we want to monitor. It may contain **dev**, **port**.

**devlink** opens Devlink Netlink socket, listens on it and dumps state changes.

**SEE ALSO**

**devlink**(8), **devlink-dev**(8), **devlink-sb**(8), **devlink-port**(8),
