

**NAME**

eutp – EuroBraille file transferring

**SYNOPSIS**

eutp

**DESCRIPTION**

*eutp* lets you exchange files with a Clio terminal from EuroBraile.

**COMMAND-LINE OPTIONS**

None so far

**RETURNED VALUE**

1 error

**SHELL EXPANSIONS**

Beware of special chars: \* and . are often expanded by your shell, hence *sending files* \* will probably do what you want, putting every file existing in the current directory onto the terminal, but *receiving files* \* may not do what you want: it will only get every file which already exist in the current directory, skipping those you just created on your terminal ! If you want to get every file which exist in the terminal, you should use '\*' or something similar (please read your shell manual).

The same warning applies to other special chars, such as \$, ~, &,... which should be protected by surrounding arguments by quotes (') or by using single backslashes (\) just before them (please read your shell manual).
