

NAME

mdvalidator – Validate XML Documents against the ECMA Documentation Schema

SYNOPSIS

mdvalidator PROVIDER [FILES]+

DESCRIPTION

mdvalidator has been obsoleted by **mdoc**(1). See the **mdoc-validate**(1) man page.

mdvalidator is a program that validates the specified *FILES* against the ECMA Documentation Schema.

The Schema also supports the *index.xml* and *namespace-name.xml* files generated by *monodocer*, so all output produced by *monodocer* can be validated.

PROVIDER

The following providers are supported:

ecma Validate the input files against the ECMA Documentation Schema.

EXAMPLES

To validate the *monodocer* output stored within a directory (and all ECMA documentation within all sub-directories, recursively), use:

```
mdvalidator ecma /path/to/ecma/docs
```
