

NAME

lp – print files

SYNOPSIS

lp [**-E**] [**-U** *username*] [**-c**] [**-d** *destination[/instance]*] [**-h** *hostname[:port]*] [**-m**] [**-n** *num-copies*] [**-o** *option[=value]*] [**-q** *priority*] [**-s**] [**-t** *title*] [**-H** *handling*] [**-P** *page-list*] [**--**] [*file(s)*]

lp [**-E**] [**-U** *username*] [**-c**] [**-h** *hostname[:port]*] [**-i** *job-id*] [**-n** *num-copies*] [**-o** *option[=value]*] [**-q** *priority*] [**-t** *title*] [**-H** *handling*] [**-P** *page-list*]

DESCRIPTION

lp submits files for printing or alters a pending job. Use a filename of "-" to force printing from the standard input.

THE DEFAULT DESTINATION

CUPS provides many ways to set the default destination. The **LPDEST** and **PRINTER** environment variables are consulted first. If neither are set, the current default set using the **lpoptions(1)** command is used, followed by the default set using the **lpadmin(8)** command.

OPTIONS

The following options are recognized by *lp*:

- Marks the end of options; use this to print a file whose name begins with a dash (-).
- E** Forces encryption when connecting to the server.
- U** *username*
Specifies the username to use when connecting to the server.
- c** This option is provided for backwards-compatibility only. On systems that support it, this option forces the print file to be copied to the spool directory before printing. In CUPS, print files are always sent to the scheduler via IPP which has the same effect.
- d** *destination*
Prints files to the named printer.
- h** *hostname[:port]*
Chooses an alternate server.
- i** *job-id*
Specifies an existing job to modify.
- m** Sends an email when the job is completed.
- n** *copies*
Sets the number of copies to print.
- o** "*name=value* [... *name=value*]"
Sets one or more job options. See "COMMON JOB OPTIONS" below.
- q** *priority*
Sets the job priority from 1 (lowest) to 100 (highest). The default priority is 50.
- s** Do not report the resulting job IDs (silent mode.)
- t** "*name*"
Sets the job name.
- H** *hh:mm*
- H** **hold**
- H** **immediate**
- H** **restart**

-H resume

Specifies when the job should be printed. A value of *immediate* will print the file immediately, a value of *hold* will hold the job indefinitely, and a UTC time value (HH:MM) will hold the job until the specified UTC (not local) time. Use a value of *resume* with the *-i* option to resume a held job. Use a value of *restart* with the *-i* option to restart a completed job.

-P page-list

Specifies which pages to print in the document. The list can contain a list of numbers and ranges (#-#) separated by commas, e.g., "1,3-5,16". The page numbers refer to the output pages and not the document's original pages – options like "number-up" can affect the numbering of the pages.

COMMON JOB OPTIONS

Aside from the printer-specific options reported by the **lpoptions(1)** command, the following generic options are available:

-o collate=true

Prints collated copies.

-o fit-to-page

Scales the print file to fit on the page.

-o job-hold-until=when

Holds the job until the specified local time. "when" can be "indefinite" to hold the until released, "day-time" to print the job between 6am and 6pm local time, "night" to print the job between 6pm and 6am local time, "second-shift" to print the job between 4pm and 12am local time, "third-shift" to print the job between 12am and 8am local time, or "weekend" to print the job on Saturday or Sunday.

-o job-hold-until=hh:mm

Holds the job until the specified time in hours and minutes UTC.

-o job-priority=priority

Set the priority to a value from 1 (lowest) to 100 (highest), which influences when a job is scheduled for printing. The default priority is typically 50.

-o job-sheets=name

Prints a cover page (banner) with the document. The "name" can be "classified", "confidential", "secret", "standard", "topsecret", or "unclassified".

-o job-sheets=start-name,end-name

Prints cover pages (banners) with the document.

-o media=size

Sets the page size to *size*. Most printers support at least the size names "a4", "letter", and "legal".

-o mirror

Mirrors each page.

-o number-up={2|4|6|9|16}

Prints 2, 4, 6, 9, or 16 document (input) pages on each output page.

-o number-up-layout=layout

Specifies the layout of pages with the "number-up" option. The "layout" string can be "btlr", "btrl", "lrbt", "lrbt", "rlbt", "rlbt", "tblr", or "tblr" – the first two letters determine the column order while the second two letters determine the row order. "bt" is bottom-to-top, "lr" is left-to-right, "rl" is right-to-left, and "tb" is top-to-bottom.

-o orientation-requested=4

Prints the job in landscape (rotated 90 degrees counter-clockwise).

-o orientation-requested=5

Prints the job in landscape (rotated 90 degrees clockwise).

-o orientation=requested=6

Prints the job in reverse portrait (rotated 180 degrees).

-o outputorder=reverse

Prints pages in reverse order.

-o page-border=*border*

Prints a border around each document page. "border" is "double", "double-thick", "single", or "single-thick".

-o page-ranges=*page-list*

Specifies which pages to print in the document. The list can contain a list of numbers and ranges (#-#) separated by commas, e.g., "1,3-5,16". The page numbers refer to the output pages and not the document's original pages – options like "number-up" can affect the numbering of the pages.

-o sides=one-sided

Prints on one side of the paper.

-o sides=two-sided-long-edge

Prints on both sides of the paper for portrait output.

-o sides=two-sided-short-edge

Prints on both sides of the paper for landscape output.

CONFORMING TO

Unlike the System V printing system, CUPS allows printer names to contain any printable character except SPACE, TAB, "/", or "#". Also, printer and class names are *not* case-sensitive.

The *-q* option accepts a different range of values than the Solaris *lp* command, matching the IPP job priority values (1-100, 100 is highest priority) instead of the Solaris values (0-39, 0 is highest priority).

EXAMPLES

Print two copies of a document to the default printer:

```
lp -n 2 filename
```

Print a double-sided legal document to a printer called "foo":

```
lp -d foo -o media=legal -o sides=two-sided-long-edge filename
```

Print a presentation document 2-up to a printer called "foo":

```
lp -d foo -o number-up=2 filename
```
