

**NAME**

**nmtui** – Text User Interface for controlling NetworkManager

**SYNOPSIS**

**nmtui-edit** | **nmtui edit** {*name* | *id*}

**nmtui-connect** | **nmtui connect** {*name* | *uuid* | *device* | *SSID*}

**nmtui-hostname** | **nmtui hostname**

**DESCRIPTION**

**nmtui** is a curses-based TUI application for interacting with NetworkManager. When starting **nmtui**, the user is prompted to choose the activity to perform unless it was specified as the first argument.

The supported activities are:

**edit**

Show a connection editor that supports adding, modifying, viewing and deleting connections. It provides similar functionality as **nm-connection-editor**.

**connect**

Show a list of available connections, with the option to activate or deactivate them. It provides similar functionality as **nm-applet**.

**hostname**

Set the system hostname.

Corresponding to above activities, **nmtui** also comes with binaries named **nmtui-edit**, **nmtui-connect**, and **nmtui-hostname** to skip the selection of the activities.

**SEE ALSO**

**nmcli**(1), **nm-applet**(1), **nm-connection-editor**(1), **NetworkManager**(8).
