NAME

lrint, lrintf, lrintl, llrintf, llrintf – round to nearest integer

SYNOPSIS

```
#include <math.h>
long int lrint(double x);
long int lrintf(float x);
long int lrintl(long double x);
long long int llrint(double x);
long long int llrintf(float x);
long long int llrintl(long double x);
```

Link with -lm.

Feature Test Macro Requirements for glibc (see **feature_test_macros**(7)):

```
All functions shown above:
```

```
_ISOC99_SOURCE || _POSIX_C_SOURCE >= 200112L
```

DESCRIPTION

These functions round their argument to the nearest integer value, using the current rounding direction (see **fesetround**(3)).

Note that unlike the **rint**(3) family of functions, the return type of these functions differs from that of their arguments.

RETURN VALUE

These functions return the rounded integer value.

If x is a NaN or an infinity, or the rounded value is too large to be stored in a *long* (*long long* in the case of the \mathbf{ll}^* functions), then a domain error occurs, and the return value is unspecified.

ERRORS

See **math_error**(7) for information on how to determine whether an error has occurred when calling these functions.

The following errors can occur:

Domain error: *x* is a NaN or infinite, or the rounded value is too large An invalid floating-point exception (**FE_INVALID**) is raised.

These functions do not set errno.

VERSIONS

These functions first appeared in glibc in version 2.1.

ATTRIBUTES

For an explanation of the terms used in this section, see **attributes**(7).

Interface	Attribute	Value
<pre>lrint(), lrintf(), lrintl(),</pre>	Thread safety	MT-Safe
<pre>llrint(), llrintf(), llrintl()</pre>		

CONFORMING TO

C99, POSIX.1-2001, POSIX.1-2008.
