#### **NAME**

pam\_warn - PAM module which logs all PAM items if called

#### **SYNOPSIS**

pam\_warn.so

#### DESCRIPTION

pam\_warn is a PAM module that logs the service, terminal, user, remote user and remote host to **syslog**(3). The items are not probed for, but instead obtained from the standard PAM items. The module always returns **PAM\_IGNORE**, indicating that it does not want to affect the authentication process.

## **OPTIONS**

This module does not recognise any options.

#### MODULE TYPES PROVIDED

The auth, account, password and session module types are provided.

### **RETURN VALUES**

PAM\_IGNORE

This module always returns PAM\_IGNORE.

## **EXAMPLES**

```
#%PAM-1.0
# If we don't have config entries for a service, the
# OTHER entries are used. To be secure, warn and deny
# access to everything.
other auth
           required
                       pam_warn.so
other auth
           required
                       pam_deny.so
other account required
                         pam_warn.so
other account required
                         pam_deny.so
other password required
                          pam_warn.so
other password required
                          pam_deny.so
other session required
                        pam_warn.so
other session required
                        pam_deny.so
```

#### **SEE ALSO**

```
pam.conf(5), pam.d(5), pam(7)
```
