# **NAME**

create-cracklib-dict - Check passwords using libcrack2

# **SYNOPSIS**

create-cracklib-dict wordlist ...

# DESCRIPTION

**create-cracklib-dict** takes one or more word list files as arguments and converts them into cracklib dictionaries for use by password checking programs. The results are placed in the default compiled-in dictionary location.

If you wish to store the dictionary in a different location, use the cracklib-format and cracklib-packer commands directly.
