NAME

DPMSInfo – returns information about the current DPMS state

SYNOPSIS

ARGUMENTS

DESCRIPTION

The *DPMSInfo* function returns information about the current Display Power Management Signaling (DPMS) state. The *state* return parameter indicates whether or not DPMS is enabled (TRUE) or disabled (FALSE). The *power_level* return parameter indicates the current power level (one of DPMSModeOn, DPMSModeStandby, DPMSModeSuspend, or DPMSModeOff.)

RETURN VALUES

TRUE The *DPMSInfo* function returns TRUE, if values are returned.

FALSE The *DPMSInfo* function returns FALSE, if no values are returned.
