NAME

```
erf, erff, erfl, - error function
```

SYNOPSIS

```
#include <math.h>
double erf(double x);
float erff(float x);
long double erfl(long double x);
Link with -lm.
```

Feature Test Macro Requirements for glibc (see **feature test macros**(7)):

| /* Glibc versions <= 2.19: */ BSD_SOURCE | _SVID_SOURCE

DESCRIPTION

These functions return the error function of x, defined as

 $erf(x) = 2/sqrt(pi)^*$ integral from 0 to x of $exp(-t^*t)$ dt

RETURN VALUE

On success, these functions return the error function of x, a value in the range [-1, 1].

If x is a NaN, a NaN is returned.

If x is +0 (-0), +0 (-0) is returned.

If x is positive infinity (negative infinity), +1 (-1) is returned.

If x is subnormal, a range error occurs, and the return value is 2*x/sqrt(pi).

ERRORS

See **math_error**(7) for information on how to determine whether an error has occurred when calling these functions.

The following errors can occur:

Range error: result underflow (x is subnormal)

An underflow floating-point exception (FE_UNDERFLOW) is raised.

These functions do not set errno.

ATTRIBUTES

For an explanation of the terms used in this section, see **attributes**(7).

Interface	Attribute	Value
erf(), erff(), erfl()	Thread safety	MT-Safe

CONFORMING TO

C99, POSIX.1-2001, POSIX.1-2008.

The variant returning double also conforms to SVr4, 4.3BSD.
