NAME

ppdpo − ppd message catalog generator (deprecated)

SYNOPSIS

ppdpo [**−D** *name*[**=***value*]] [**−I** *include-directory*] [**−o** *output-file*] *source-file*

DESCRIPTION

ppdpo extracts UI strings from PPDC source files and updates either a GNU gettext or macOS strings format message catalog source file for translation. **This program is deprecated and will be removed in a future release of CUPS.**

OPTIONS

ppdpo supports the following options:

−D *name*[**=***value*]

Sets the named variable for use in the source file. It is equivalent to using the *#define* directive in the source file.

−I *include-directory*

Specifies an alternate include directory. Multiple *-I* options can be supplied to add additional directories.

−o *output-file*

Specifies the output file. The supported extensions are *.po* or *.po.gz* for GNU gettext format message catalogs and *.strings* for macOS strings files.
