NAME

mpif77, mpif90 -- Deprecated Open MPI Fortran wrapper compilers

SYNTAX

mpif90 ...

DESCRIPTION

The *mpif77* and *mpif90* wrapper compiler names are deprecated, and will disappear in a future version of Open MPI. You should use the *mpifort* wrapper compiler, instead. While they are deprecated, *mpif77* and *mpif90* accept all the same parameters as *mpifort*, and behaves the same as *mpifort*.

With *mpifort*, you can compile any Fortran program that uses the "mpif.h", "use mpi", and/or "use mpi_f08" MPI Fortran interfaces.

See mpifort(1) for more details.
