NAME

        eval – evaluate arbitrary perl code using actions

EXAMPLES

```
URxvt.keysym.M-c: eval:selection_to_clipboard
URxvt.keysym.M-v: eval:paste_clipboard
URxvt.keysym.M-V: eval:paste_primary

URxvt.keysym.M-Up: eval:scroll_up 1
URxvt.keysym.M-Down: eval:scroll_down 1
URxvt.keysym.M-Home: eval:scroll_to_top
URxvt.keysym.M-End:  eval:scroll_to_bottom
```

DESCRIPTION

        Add support for evaluating arbitrary perl code using actions in keysym resources. If a keysym *action* takes the form `eval:`STRING, the specified **STRING** is evaluated as a Perl expression. While the full urxvt API is available, the following methods are also provided for users' convenience, as they implement basic actions:

scroll_up `$count`
scroll_up_pages `$count`
scroll_down `$count`
scroll_down_pages `$count`
        Scroll up or down by `$count` lines or pages.

scroll_to_top
scroll_to_bottom
        Scroll to the top or bottom of the scrollback.

selection_to_clipboard
        Copy the selection to the CLIPBOARD.

paste_primary
paste_clipboard
        Paste the value of the PRIMARY or CLIPBOARD selection.
